Our Flame, Your Fire

Creating a dramatic focal point in your home begins with a custom fire. Any combination of the options below can drive your interior design. Whether you're looking to complement your grate room, showcase your entertainment area, or divide the dining room from the bar, make a statement with elements that reflect your style and inspire your home.

- 34,000 Btu/Hr Input (NG)
- Choice of six colored glass/rocks
- Reflective porcelain or black granite refractory
- Illuminated or non-illuminated base

LED Enhanced Custom Media

The area around your ribbon fire has many options. Choose the smooth sleek look of black granite stone, or create a "fire & ice" effect with crystal glass rocks. The color palate is bold and the look is stunning.

Adding highly efficient LED accent lighting to your fireplace will enhance the color of the media glass. Accent lighting is also great for year-round ambience or as a night light in the room.

Surround

Combining the absolute black granite stone surround with the matching black granite refractory results in a true, seamless transition between the firebox and the wall surround. All RED40 Series fireplaces ship with a standard mesh frame.
